Wellington Oliveira

Senior Software Engineer @ BairesDev | React, Next.js, Node.js,
React Native, TypeScript

Campo Grande, Mato Grosso do Sul, Brazil

Summary

A Senior Software Engineer at BairesDev with over five years of experience delivering mobile and full-stack solutions. Specializing in React Native, TypeScript, GraphQL, and Expo, contributing to the development of a hospitality-focused mobile application supporting iOS and Android. Work includes integrations for thermal printers, push notifications, subscriptions, and various rich media formats. The role involves creating systems leveraging Claude API and RAG pipelines to automate processes and enhance customer experiences. Emphasis is placed on testing culture, code quality, and CI/CD practices. Dedicated to advancing engineering standards and impactful product development at the intersection of technology and user-centric design.

Experience

BairesDev

5 years 5 months

Senior Software Engineer

April 2021 - August 2026 (5 years 5 months)

Atlanta, GA

Senior engineer on a React Native application (React Native, Expo, TypeScript, GraphQL) for a hospitality startup based in Atlanta, Georgia (USA), covering iOS and Android with integrations for thermal printers, push notifications, subscriptions and rich media such as video, audio, photos and social posts.

- Build agentic systems and LLM-powered features with the Claude API and RAG pipelines, automating internal processes and improving the customer experience.

- Deliver features across the stack, from mobile screens to the Ruby on Rails, Ruby-GraphQL and PostgreSQL back end: online ordering, payment

processing, social media publishing (Facebook, X and other platforms) and reservation scheduling with waitlist and table-top booking.

- Contribute to the main web platforms and the POS product, developing new features and owning code maintenance.
- Drive software architecture and code-quality decisions, review code and mentor mid-level and junior engineers.
- Lead the effort on testing culture, process automation and CI/CD, improving release predictability and developer experience across the project.

Technical Interviewer

September 2022 - July 2026 (3 years 11 months)

Conduct technical interviews for React, React Native, JavaScript, TypeScript and front-end roles: more than 300 interviews to date. Co-designed the evaluation scorecards used for these technologies, standardising how candidates are assessed across the hiring pipeline. Focused on making the interview a positive experience for both the candidate and BairesDev.

Technical Interviewer

November 2021 - February 2022 (4 months)

Seattle, Washington, United States

Dextra

Senior Software Engineer

August 2020 - March 2021 (8 months)

Campinas, SP

One of the lead senior engineers on "Dasa Nav", a mobile health platform offering telemedicine and other healthcare services, built with React Native, React, TypeScript, JavaScript and Node.js.

- Delivered end-to-end product features on the mobile application, from UI screens to the supporting GraphQL back-end services.
- Automated the release process to the App Store and Google Play with Fastlane, removing manual steps from every deploy.
- Championed code quality, automated tests and DevOps practices across the project.
- Dasa Nav is live on the App Store and Google Play and serves around 10k users.

TecSinapse

5 years 1 month

Squad Lead & Full Stack Software Engineer

July 2019 - July 2020 (1 year 1 month)

Led the squad and TecSinapse's Product Innovation Lab as scrum master and team manager, building the libraries, components and tools that were later incorporated into the company's core products.

- Architected micro-frontend solutions with Module Federation in React, enabling independent deployment of multiple front-end applications inside a unified shell.
- Delivered the mobile version of the company's flagship product as a multiplatform React PWA, including the first offline PWA in Brazil using a GraphQL cache as a BFF layer between React clients and Java/Spring Boot services.
- Owned the design system, shared React front-end components, and messaging and VoIP solutions.
- Managed and mentored the team, running agile ceremonies and technical planning.
- Main stack: React, JavaScript, GraphQL, Spring and Spring Boot.

Mid-level Full Stack Software Engineer (Java/JavaScript)

August 2018 - July 2019 (1 year)

Campo Grande, MS

Built PWAs and mobile applications with the React ecosystem (Redux, Context API, Recompose), using GraphQL as middleware and Java with Spring on the back end.

- Implemented a GraphQL middleware acting as a Backend for Frontend (BFF) layer between React clients and Java/Spring Boot APIs, decoupling front-end data requirements from back-end domain models.
- Created reusable component libraries shared across multiple teams.
- Integrated RESTful services with OAuth-based authentication flows and Node.js/Express middleware.
- Stack: JavaScript, TypeScript, ES6, React, GraphQL, Node.js, Java and Spring.

Junior Software Engineer (Java)

June 2016 - August 2018 (2 years 3 months)

Campo Grande, MS

Developed automotive software focused on vehicle inspection with Spring, Spring MVC, EJB and Maven, while keeping the legacy version of the system running as the new one was being built.

- Migrated modules from Spring to EJB and built JSF pages for the new version of the product.
- Built a lead-capture integration with Facebook Leads.
- Maintained and optimised SQL queries over large data volumes.

Software Engineering Intern
 July 2015 - May 2016 (11 months)
 Campo Grande, MS

Developed Java web systems with EJB, JSF and PostgreSQL, taking part in the full development life cycle of a new helpdesk product with a strong focus on user experience and direct contact with internal clients.

- Migrated tickets from legacy systems, capturing them one by one through webhooks and importing them into the new product over several months.
- Covered the system with unit and integration tests using CasperJS, the first TecSinapse product to adopt automated testing.

Indext
 Co-Founder & Software Engineer
 December 2015 - October 2019 (3 years 11 months)
 Campo Grande, MS

Co-founded Indext Technological Solutions with colleagues from LSCAD/UFMS (High Performance Computing Systems Laboratory) to take solutions from the university environment to the market, with a focus on the agtech sector. Worked part-time across engineering, product and business roles.

- Managed agtech software projects as project manager and requirements analyst, from discovery to delivery.
- Architected and built React applications, defining architecture and leading integrations across projects using Firebase and AWS services.
- Led the technical side of the company, organising the team and mentoring developers, and also handled marketing management.

Closed my activities in September 2019 to take over the leadership of the Product Innovation Lab at TecSinapse.

Universidade Federal de Mato Grosso do Sul
 Scientific Initiation Scholarship - PIBIC/CNPq
 June 2014 - September 2015 (1 year 4 months)

Work on Global Optimization implementation in C Language of Branch-and-Bound algorithm, working with some art-state results, and trying to reproduce them' results at C Language

Education

Universidade Federal de Mato Grosso do Sul (UFMS)

Master's Degree, Computer Science · (February 2026 - February 2028)

USP - Universidade de São Paulo

Master of Business Administration - MBA, Artificial Intelligence · (July 2023 - December 2024)

Universidade Federal de Mato Grosso do Sul (UFMS)

Bachelor's Degree, Computer Engineering · (2011 - 2016)
